

## M.Tech. in Materials Engineering

### SEMESTER I

| S.No. | Course Code | Course Name   | Contact Hours |   |    | Credits |
|-------|-------------|---|---------------|---|----|---------|
|       |             |   | L             | T | P  |         |
| 1     | MM-601      | Concepts in Metal and Ceramic                       | 3             | 0 | 2  | 4       |
| 2     | MM-602      | Materials Characterization                          | 3             | 0 | 2  | 4       |
| 3     | MM-603      | Thermodynamics of Materials                         | 3             | 1 | 0  | 4       |
| 4     | MM-604      | Polymers and Composites Technology                  | 3             | 0 | 2  | 4       |
| 5     | MM-605      | Physical and Mechanical Metallurgy                  | 3             | 0 | 2  | 4       |
| 6     | MM-606      | Mathematics for Computational Materials Engineering | 3             | 0 | 2  | 4       |
| 7     | PGC-601     | Research Methodology and IPR                        | 2             | 0 | 0  | 2       |
|       |             | Total   | 20            | 1 | 10 | 26      |

### SEMESTER II

| S.No. | Course Code | Course                                    | Contact Hours/week |   |   | Credits |
|-------|-------------|---|--------------------|---|---|---------|
|       |             |   | L                  | T | P |         |
| 1     | MM 608      | Fatigue, Fracture and Failure Analysis    | 3                  | 1 | 0 | 4       |
| 2     | MM 609      | Materials Processing                      | 3                  | 0 | 2 | 4       |
| 3     |             | Elective I (from Departmental Electives)  | 3                  | 1 | 0 | 4       |
| 4     |             | Elective II (from Departmental Electives) | 3                  | 1 | 0 | 4       |
| 5     |             | Elective – III (from Open Electives)      | 3                  | 1 | 0 | 4       |
| 6     |             | Elective – IV (from Open Electives)       | 3                  | 1 | 0 | 4       |
| 7     | PGC-602     | Audit Course                              | 2                  | 0 | 0 | 0       |
|       |             | Total                                     | 18                 | 6 | 0 | 24      |

### **SEMESTER III**

| Sl. No. | Course Code | Course                       | Contact Hours /week |     | Credits |
|---------|-------------|------------------------------|---------------------|-----|---------|
|         |             |                              | L                   | T/P |         |
| 1       | MM-651      | M.Tech. Dissertation Phase I | 28                  |     | 14      |
|         |             | Total                        | 28                  |     | 14      |

### **SEMESTER IV**

| Sl. No. | Course Code | Course                        | Contact Hours /week |     | Credits |
|---------|-------------|-------------------------------|---------------------|-----|---------|
|         |             |                               | L                   | T/P |         |
| 1       | MM-652      | M.Tech. Dissertation Phase II | 28                  |     | 14      |
|         |             | Total                         | 28                  |     | 14      |

### **List of Electives:**

| Sr. No. | Course Code | Electives from the Department                       |
|---------|-------------|---|
| 1.      | MM 607      | Design of Materials                                 |
| 2.      | MM 610      | Nanomaterial and Their Applications                 |
| 3.      | MM 611      | Non-Destructive Evaluations                         |
| 4.      | MM 612      | Polymer blends and Nanocomposites                   |
| 5.      | MM 613      | Biomaterials  |
| 6.      | MM 614      | Introduction to Computational Materials Engineering |
| 7.      | MM 615      | Magnetism and Magnetic Materials                    |
| 8.      | MM 616      | Design of Materials                                 |
| 9.      | MM 617      | Materials for High -Temperature Applications        |
| 10.     | MM 618      | Advanced Steel Technology                           |
| 11.     | MM 619      | Military Materials                                  |
| 12.     | MM 620      | Introduction to Corrosion                           |
| 13.     | MM 621      | Welding Science and Technology                      |

|     |        |                                     |
|-----|--------|-------------------------------------|
| 14. | MM 622 | High temperature Corrosion          |
| 15. | MM 623 | Corrosion mitigation                |
| 16. | MM 624 | Advanced Coating                    |
| 17. | MM625  | Surface Science and Engineering     |
| 18. | MM 626 | Reliability Engineering             |
| 19. | MM 627 | Electrical and Electronic Materials |

## **Program Outcomes (POs)**

- **PO1:** An ability to independently carry out research /investigation and development work to solve practical problems
- **PO2:** An ability to write and present a substantial technical report/document
- **PO3:** Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

## **Program Specific Outcomes (PSOs)**

**On completion of M.Tech (Materials Engineering) programme graduates will be able to**

- **PSO1:** To analyse and tackle the complex and diverse engineering problems by appropriate experimentation and interpretation, and, provide probable solutions by applying principles of Materials engineering in combination to the fundamental knowledge of basic sciences.
- **PSO2:** To be able to design and device new procedures to arrive at a solution for identifying or troubleshooting problems at fundamental/system/component level.
- **PSO3:** An ability to work together collaboratively in multidisciplinary teams to tackle multifaceted problems and pursue a bright career in Materials engineering and allied areas by demonstrating professional success at different platforms within industry, governmental bodies such as Defence Research and Development Organization & Tri -services (Army, Navy & Air force), Coast Guard, DGQA, DQA, and Defence Public Sector units.

## ➤ **Course Structure:**

**Course Name: Concepts in Metal and Ceramic**

**Course Code: MM 601**

|                              |  |
|------------------------------|--|
| <b>Course Outcomes (CO):</b> |  |
| CO-1:                        | Understanding classifications and characteristics of materials |

|       |  |
|-------|--|
| CO-2: | Analysis and properties of crystalline materials                                 |
| CO-3: | Detailed overview of ceramics and their characteristics                          |
| CO-4: | Cognizance of dielectrics, refractories and their applications                   |
| CO-5: | Demonstration of Solid state, Sol-Gel, Hydrothermal and Co-precipitation process |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Introduction, classification of materials; atomic structure, bonding in solids, bonding forces and energies; crystal structure, unit cells, crystal systems, crystallographic points, directions, and planes  |
| Unit II                 | crystalline and non-crystalline materials, anisotropy; Structure of crystalline solids:<br>metallic crystal structure   |
| Unit III                | ceramic materials, Basic properties, classification of ceramic materials—conventional and advanced, ceramic crystal structure, Defects in ceramics: types of defects, origin of point defects, defects and electron energy levels, defect equilibria in ceramic crystals, Phase equilibria in ceramics  |
| Unit IV                 | Dielectrics: Dielectric strength, Loss factor. Equivalent circuit description of linear dielectrics, Power factor, Dielectric polarisation, Polarisation mechanisms, Applications. Refractories: Classification of Refractories, Applications. Glass: Definition of glass, Basic concepts of glass structure, Different types of glasses. Application of glasses. |
| Unit V                  | Practical: Solid state, Sol-Gel, Hydrothermal and Co-precipitation process  |

### **Textbooks**

- *Materials Science and Engineering by William D. Callister, John Wiley & Sons, Inc.*
- *Elements of Materials Science and Engineering by Lawrence H. van Vlack.*

### **Reference Book(s):**

- *Elements of Ceramics: F.H Norton*
- *Fundamentals of Ceramics: Barsoum*
- *Introduction to Ceramics: W.D. Kingery*
- *Physical Ceramics for Engineers: VanVlack*
- *Handbook of Ceramics: Editor S. Kumar Ceramic*
- *Materials for Electronics: R.C. Buchanon*

### **Course Name: Materials Characterization**

### **Course Code: MM 602**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Illustrate the diffraction techniques and its interpretation.           |
| CO-2:                        | Described several microscopy instruments and their imaging fundamentals |
| CO-3:                        | Summarized spectroscopy techniques and their applications               |

|       |   |
|-------|---|
| CO-4: | Understanding of thermal analysis techniques                        |
| CO-5: | Hands on experience of microscopy techniques and corrosion methods. |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Diffraction Techniques- Concepts of diffraction, scattering and radiation-matter interactions, X-ray diffraction: phase identification, strain and grain size determination   |
| Unit II                 | Microscopy and Imaging- Fundamentals of Imaging: magnification, resolution, depth of field and depth of focus, aberration and astigmatism, SEM: imaging modes, image contrast, illustrative applications, Basic principle and components of TEM: Contrast mechanisms, bright field, dark field, TEM application in crystal defect analysis, Electro diffraction in TEM, STM and AFM |
| Unit III                | Spectroscopic Techniques- Fundamental basis of Spectroscopic analysis EDS and WDS applications, X-ray Photoelectron Spectroscopy and Auger electron spectroscopy  |
| Unit IV                 | Thermal Analysis Techniques- DSC, DTA, TGA and Dilatometry, Electrochemical polarization characterization, Electrochemical Impedance spectroscopy.  |
| Unit V                  | Practical: XRD, TEM, SEM, Cyclic voltammetry, Tafel plot, and Salt Spray, weatherometer, cyclic corrosion test, cathodic protection monitoring, localised corrosion monitoring methods (SECM, SEVT)   |

### **Textbooks**

- *Elements of X-ray Diffraction, B. D. Cullity, Prentice Hall, 2001*
- *Solid State Chemistry and its Applications, Anthony R. West, Wiley.*

### **Reference Book(s):**

- *Materials Characterization, ASM Handbook Vol 10.*
- *Characterization of Materials, Vol 1, Elton N. Kaufmann*

### **Course Name: Thermodynamics of Materials**

### **Course Code: MM 603**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Understand the basic principles of thermodynamic concepts                                    |
| CO-2:                        | Learn the thermodynamic relations among variables and their transformations                  |
| CO-3:                        | Demonstrate basics of statistical thermodynamics   |
| CO-4:                        | Analysing free energy equation and curves and its interpretation for single component system |
| CO-5:                        | Detailed understanding of binary system, phases formation and chemical potential             |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Simple and composite systems, phases, Internal energy, Enthalpy, Entropy, Gibbs Free energy, Specific heat, Laws of thermodynamics, Reversible and Irreversible processes, adiabatic work interaction.                  |
| Unit II                 | Generation of Auxiliary Functions: Legendre transforms, Coefficient relations, Maxwell's relations, Thermodynamic relations among state functions variables and its application to solids                               |
| Unit III                | Statistical definition of temperature and entropy, Micro- and Macro-states, Maxwell- Boltzmann distribution, Thermodynamic equilibrium: stable equilibrium states, criteria for equilibrium                             |
| Unit IV                 | Free energy of single component system: Free energy as a function of temperature, Clausius-Clapeyron Equation, Driving force for solidification; Equilibrium vacancy concentration and Analysis of Magnetic transitions |

### **Textbooks**

- *David R. Gaskell, Introduction to the Thermodynamics of Materials, Taylor & Francis, 1798*
- *Ahindra Ghosh, Textbook of Materials and Metallurgical thermodynamics. Prentice Hall of INDIA 2003*

### **Reference Book(s):**

- *R.T. DeHoff, Thermodynamics in Materials Science, McGraw-Hill, Singapore, 1993*
- *D. A. Porter and K. E. Easterling, Phase transformations in Metals and Alloys, Chapman and Hall, London, 1996*
- *Taiji Nishizawa, Thermodynamics of microstructures, ASM International*

### **Course Name: Polymer and Composite Technology**

### **Course Code: MM 604**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Understanding classifications and characteristics of polymers    |
| CO-2:                        | Analysis of the polymer properties                               |
| CO-3:                        | Conception of composite and nanofiller                           |
| CO-4:                        | Cognizance of Manufacturing of composites                        |
| CO-5:                        | Case studies of polymers and composites for Defence Applications |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Polymers: Classification of Polymers, Co-Polymers, Thermoset and Thermoplastics, Crystalline and Amorphous Polymers, Polymerization, Degree of Polymerization, Glass transition temperature, Molecular weight of polymer and its determination by various techniques. |

|          |  |
|----------|--|
| Unit II  | Physical methods of polymer analysis such as IR, DSC, TGA, XRD etc., Viscoelasticity, Polymer blends and alloys: thermodynamics, morphology and properties   |
| Unit III | Composites: Conventional polymer composites, Fiber reinforced composites, Nanofillers and their composites; Recycling of macro and micro polymer composites  |
| Unit IV  | Composite manufacturing techniques: Solution-cast, Melt-mixing, Extrusion, Compression molding, Resin transfer, Resin infusion, Vacuum casting and electrospinning.  |
| Unit V   | Defence Applications: Coatings (Superhydrophobic, Self-Healing), Fire retardant, Corrosion Resistant, EMI Shielding, Environmental responsive polymers (Self-healing, Phase change and Shape Memory), Polymer composites in aerospace applications. Service life prediction methodologies of polymers and composites |

### **Textbooks**

- V.R. Gowariker, *Polymer Science, Wiley Eastern, 1995*
- F. N. Billmeyer, *Textbook of Polymer Science, Wiley Interscience, 1971.*

### **Reference Book(s):**

- Kumar and S. K. Gupta, *Fundamentals and Polymer Science and Engineering, Tata McGraw-Hill, 1978*
- Epel, J.N.: *Engineering Plastics, Engineering Materials Handbook, ASM International 1988.*
- Brydson, A.J. : *Plastics Materials, Princeton, N.J., 1966*

### **Course Name: Physical and Mechanical Metallurgy**

### **Course Code: MM 605**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Identify the defects in metals and phases in Fe-FeC diagram with TTT and CCT diagrams |
| CO-2:                        | Analysis of defects transfer in crystal structure                                     |
| CO-3:                        | Conception of several strengthening mechanisms  |
| CO-4:                        | Cognizance of strength testing in materials and dependent phenomenon                  |
| CO-5:                        | Case studies of metallurgy testing techniques   |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Crystal defects/imperfection in Metals, dislocations, burger vectors, dislocations multiplications, dislocation interactions, stacking faults, Phase rule, Phase diagram, Eutectic, Fe-FeC diagram, TTT and CCT diagrams for carbon steel |

|          |  |
|----------|--|
| Unit II  | Plastic deformation in single crystal, critical resolved shear strength, deformation   |
| Unit III | Strengthening mechanisms: Solid solution strengthening, strengthening from grain boundaries, strains hardening, strain ageing, annealing of cold worked materials, strengthening from particles, precipitation hardening |
| Unit IV  | Hardness and tensile testing, stress-strain relationships, effect of strain, strain rate and temperature on flow stress, nanoindentation, High temperature deformation and Creep, Superplasticity                        |
| Unit V   | Practical: Metal Polishing and Etching, Optical Microstructural Characterization, Wear and friction, hardness testing  |

### Textbooks

- *Mechanical Metallurgy*, G.E. Dieter, McGraw-Hill book company, 1988

### Reference Book(s):

- *Mechanical behaviour of Materials*, Williams F Hosford, Cambridge University press, 2005
- *Materials Science and Engineering* by William D. Callister, John Wiley & Sons, Inc.
- *Physical Metallurgy Principles*, Robert E Reed Hill, Cengage Learning, Inc publications, 1992
- *Physical Metallurgy*, Vijendra Singh, Standard Publishers Distributors, 2010.

### Course Name: Mathematics for Computational Materials Engineering

#### Course Code: MM 606

| Course Outcomes (CO): |   |
|-----------------------|---|
| CO-1:                 | Understand the basics of Linear Algebra                   |
| CO-2:                 | Recognize the principles of advanced calculus             |
| CO-3:                 | Introduce vector calculus                                 |
| CO-4:                 | Utilise numerical methods to solve differential equations |

| Syllabus Details |   |
|------------------|---|
| Unit I           | Algebra of real matrices: Determinant, inverse and rank of a matrix; System of linear equations (conditions for unique solution, no solution and infinite number of solutions); Eigenvalues and eigenvectors of matrices; Properties of eigenvalues and eigenvectors of symmetric matrices, diagonalization of matrices; Cayley-Hamilton Theorem. |
| Unit II          | Limit, Continuity and differentiability; Maxima and minima; Partial derivatives; Total derivative.  |
| Unit III         | Gradient, divergence and curl; Line integrals, and Green's theorem.   |
| Unit IV          | Concepts of discretization in space/time, implicit, explicit; Taylor's series; Solution to ODEs; Classification of second order linear partial differential   |

|  |   |
|--|---|
|  | equations; Method of separation of variables: One dimensional heat equation and two-dimensional Laplace equation. |
|--|---|

### Textbooks

- *Advanced engineering mathematics: Kreyszig; Wiley.*
- *Advanced engineering mathematics: Jain/Iyenger; Narosa*

### Reference Book(s):

- *Advanced engineering mathematics: Peter V. O'Neil Cengage Learning*
- *Advanced engineering mathematics: Alan Jeffery; Academic Press*

### Course Name: Design of Materials

### Course Code: MM 607

| Course Outcomes (CO): |  |
|-----------------------|--|
| CO-1:                 | Principles of solid-state diffusion, their equation along with solution.         |
| CO-2:                 | Applications of several mechanical alloys and their phase diagrams               |
| CO-3:                 | Cognizance of phase transformations processes                                    |
| CO-4:                 | Understanding ceramics and statistics of brittle fracture                        |
| CO-5:                 | Demonstration of Solid state, Sol-Gel, Hydrothermal and Co-precipitation process |

| Syllabus Details |  |
|------------------|--|
| Unit I           | Diffusion: First and Second law of diffusion, Solution to diffusion equations and error function, Types of diffusion, Kirkendall effect and applications   |
| Unit II          | Metals and Metal Structures: Generic classes of Metallic alloys and applications, Equilibrium shapes of grains and phases;<br>Case studies in phase diagrams: Soft solders, Zone Refinement of Semiconductors, Bubble free Ice   |
| Unit III         | Diffusive and Displacive Transformations: Kinetics of nucleation, diffusive and Martensitic phase transformations;<br>Case Studies in Phase Transformations: Fine grain castings, Rapid solidification and amorphous materials;<br>Light alloys: Age-hardening and thermal stability |
| Unit IV          | Mechanical properties of Ceramics, Statistics of Brittle fracture: Flaw size and dispersion of strength, Weibull distribution, Design of pressure windows  |
| Unit V           | Composites: Fibrous, particulate and foamed composites, Improving stiffness, strength and toughness.<br>Case studies in Defence applications: Turbine blades, bullet-proof vests, uses of metal matrix composites and carbon-carbon composites.                                      |

### Textbooks

- *Engineering Materials 1 Michael F. Ashby and David R. H. Jones; Butterworth-Heinemann, Elsevier Publications*
- *Engineering Materials 2 Michael F. Ashby and David R. H. Jones; Butterworth-Heinemann, Elsevier Publications*

**Reference Book(s):**

- *D. A. Porter and K. E. Easterling, Phase transformations in Metals and Alloys, Chapman and Hall, London, 1996*
- *Physical Metallurgy Principles, Robert E Reed Hill, Cengage Learning, Inc publications, 1992*

**Course Name: Fatigue, Fracture and Failure Analysis**

**Course Code: MM 608**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Detailed introduction to fatigue failure of materials                      |
| CO-2:                        | Analyze the effect of fatigue crack propagation and improving fatigue life |
| CO-3:                        | Conception of fracture mechanics   |
| CO-4:                        | Conceptualize stresses induced during brittle fracture                     |
| CO-5:                        | Understanding fracture toughness in metals and alloys                      |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Stress cycles, Interpretation of Fatigue Data. Endurance Limit, Effect of Mean Stress on Fatigue, Cyclic Stress-Strain Curve, Low Cycle Fatigue, Plastic Strain & Fatigue Life,   |
| Unit II                 | Effect of Structural Features, Fatigue Crack Propagation, Stress Concentration & Fatigue, Size & Surface Effect, Effect of Metallurgical Variables & Enhancement of Fatigue Life, |
| Unit III                | Classification of Fracture, Theoretical Strength of Metals, Griffith Theory of Brittle Fracture, Metallographic features of Fracture, Fractography                                |
| Unit IV                 | Dislocation Theory of Brittle Fracture, Effect of Tri-axial Stress, Strain Energy Release Rate, Stress Intensity Factor,  |
| Unit V                  | Fracture Toughness & Design, KIC, CTOD, J-Integral, R-Curve, Toughness of Metals & Alloys. Stress corrosion cracking.   |

**Textbooks**

- *Mechanical Metallurgy, 3rd Ed, George E Dieter, Mc-Graw Hill, New York, 1986.*

**Reference Book(s):**

- *Deformation and fracture mechanics of engineering materials, 4th Ed., R. W. Hertzberg, John Wiley & Sons, 1995.*
- *Elementary engineering fracture mechanics By David Broek Noordhoff 1974.*
- *Fatigue and Fracture of Metals, W. M. Murray, John Wiley, 1952.*

**Course Name: Materials Processing**

**Course Code: MM 609**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Understand the processing of polymers     |
| CO-2:                        | Analyse the processing of ceramics        |
| CO-3:                        | Comprehend the processing of metals       |
| CO-4:                        | Identify the metal forming processes      |
| CO-5:                        | Demonstration of various processing units |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | <b>Processing of Polymers-</b> Extrusion, compounding, fiber spinning, injection moulding, compression moulding, Additive manufacturing |
| Unit II                 | <b>Processing of ceramics-</b> Compaction, moulding, sintering, refractory manufacturing processes, glass manufacturing techniques.     |
| Unit III                | <b>Processing of Metals-</b> Casting, Hot working, Cold working, Rolling, Annealing, Forging, Extrusion,                                |
| Unit IV                 | Wire drawing, Sheet metal forming, Joining Techniques, Friction stir welding, Powder Metallurgy   |
| Unit V                  | Practical: Metal processing- rolling, annealing; polymer processing-Extrusion and compression molding, electrospinning                  |

**Textbooks**

- *Mechanical Metallurgy, 3rd Ed, George E Dieter, Mc-Graw Hill, New York, 1986.*
- *Manufacturing Processes and Materials for Engineers, L. E. Doyle, 1975. Powder*

**Reference Book(s):**

- *Metallurgy, Applications, Advantages and Limitations, Klar, Erhard, ASM, 1983, Ohio.*
- *Plastics Processing Data Handbook (2nd Edition), Rosato, Dominick, 1997.*
- *Plastic Injection Molding: Manufacturing by Douglas M. Bryce, 2007.*
- *Concise encyclopedia of plastics, Rosato, Marlene G, 2005*
- *Extrusion: the definitive processing guide and handbook, Giles, Harold F.; Wagner, John R.; Mount, Eldridge M, 2005.*

**Course Name: Nanomaterial and Their Applications**

**Course Code: MM 610**

| <b>Course Outcomes (CO):</b> |
|------------------------------|
|------------------------------|

|       |  |
|-------|--|
| CO-1: | Learn the strategies for synthesis of nanomaterials                                      |
| CO-2: | Classification of nanomaterials and analysis of the defects in crystalline nanomaterials |
| CO-3: | Analyze the structure property variation when reduced to nanoscale.                      |
| CO-4: | Understanding thermodynamics of nanomaterials  |
| CO-5: | Case studies of nanomaterials in Defence applications                                    |

| <b>Syllabus Details</b> |  |
|-------------------------|--|
| Unit I                  | Overview of Nanostructures and Nanomaterials; Synthesis of Nanomaterials: Types and strategies for synthesis of nanomaterials;   |
| Unit II                 | Crystalline nanomaterials and defects therein; Hybrid nanomaterials; Multiscale hierarchical structures built out of nanosized building blocks (nano to macro); Nanomaterials in Nature: Nacre, Gecko, Teeth; Nanostructures: Carbon Nanotubes, Fullerenes, Nanowires, Quantum Dots.                     |
| Unit III                | Cells response to Nanostructures; Surfaces and interfaces in nanostructures, Ceramic interfaces, Superhydrophobic surfaces, Grain boundaries in Nanocrystalline materials, Defects associated with interfaces;   |
| Unit IV                 | Thermodynamics of Nanomaterials; Overview of properties of nanostructures and nanomaterials; Overview of characterization of nanostructures and nanomaterials; Deformation behaviour of nanomaterials: Fracture and creep; Nanomechanics and nanotribology; Electrical, Magnetic and Optical properties; |
| Unit V                  | Applications of Nanotechnology in various fields: Defence, Aerospace and Marine Nanotechnology, Renewable energy, solar energy, fuel cells, Reinforcement in Ceramics, Drug delivery, Electronics etc.   |

### **Textbooks**

- *T. Pradeep, NANO: The Essentials, Tata McGraw-Hill Publisher, 2007. ISBN-13:978- 0-07-061788-9.*

### **Reference Book(s):**

- *K. Haghi, G. E. Zaikov, Advanced Nanotube and Nanofiber Materials, Nova Science Publishers Inc, 2012*
- *Vladimir V. Mitin, Viatcheslav A. Kochelap, Michael A. Stroscio, Introduction to Nanoelectronics: Science, Nanotechnology, Engineering, and Applications, Cambridge University Press, 2008*

### **Course Name: Non-Destructive Evaluations**

### **Course Code: MM 611**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Detailed introduction to handy NDT (Non-destructive techniques) |
| CO-2:                        | Cognizance of Eddy current and ultrasonic testing               |

|       |  |
|-------|--|
| CO-3: | Conception of acoustic emission and radiography techniques |
| CO-4: | Understanding automated NDT techniques                     |
| CO-5: | Case studies on NDT techniques application                 |

| <b>Syllabus Details</b> |  |
|-------------------------|--|
| Unit I                  | Visual Inspection, Liquid Penetrant Testing, Magnetic Particle Testing,      |
| Unit II                 | Eddy Current Testing, Ultrasonic Testing,                                    |
| Unit III                | Acoustic Emission Technique, Radiography Technique                           |
| Unit IV                 | Residual Stress Analysis, In-situ Metallography, Automation and Robot in NDT |
| Unit V                  | Case study: Grain Size, Weldment and other Structural Components.            |

### **Textbooks**

- *Non-destructive Testing of welds*, Baldev Raj, C.V. Subramanian and T. Jayakumar, Narosa Publishing House, 2000, Delhi.

### **Reference Book(s):**

- *International Advances in non-destructive testing*, (Ed.) W. J. McGonnagle, Gordon and Breach Science Publishers, 1981, NY.
- *Non-destructive Testing, Views, Reviews, Previews*, (Ed.) L.L. Alston, Oxford University Press, 1970
- *Nondestructive Evaluation and quality control*, ASM handbook, Volume 17, ASM International

### **Course Name: Polymer Blends and Nanocomposites**

### **Course Code: MM 612**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Detailed introduction to polymer blends and nanocomposites with miscible and phase separated thermodynamic aspects |
| CO-2:                        | Classified polymer blends and composites   |
| CO-3:                        | Conception of nanostructured materials and interface of reinforced materials                                       |
| CO-4:                        | Demonstrated several processing methods for polymer blends   |
| CO-5:                        | Case studies of polymer nanocomposites in defence applications   |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Introduction to polymer blends and composites, nanostructured materials and nanocomposites Thermodynamical aspects of polymer miscibility, mixing, factors governing miscibility, immiscible polymers and phase separation. Importance of interface on the property development, compatibilizers and compatibilization. |
| Unit II                 | Blends of amorphous & semi-crystalline polymers, inter-penetrating networks, thermoplastic and thermoset blends, rubber toughened polymers, particulate and fiber reinforced composites.  |

|          |  |
|----------|--|
| Unit III | Nanostructured materials like nanoclay, carbon nanotubes, graphene, magnetic nanoparticles etc. and polymer nanocomposites. Surface treatment of the reinforcing materials and interface/interphase structures of composites/nanocomposites. |
| Unit IV  | Various processing techniques like solution mixing, melt processing. Physical and thermo-mechanical properties of polymer blends, composites and nanocomposites.   |
| Unit V   | Potential Applications in Defence.   |

### Textbooks

- *Textbook of Polymer Science, Fred W. Billmeyer (Wiley)*
- *Polymer alloys and blends by L A Utracki*

### Reference Book(s):

- *Polymer nanocomposites: processing, characterization, and applications by Joseph H. Koo (McGraw-Hill Nanoscience and Technology)*

### Course Name: Biomaterials

### Course Code: MM 613

| Course Outcomes (CO): |   |
|-----------------------|---|
| CO-1:                 | Detailed discussion of biomaterials along with applications |
| CO-2:                 | Elaborate the classification of biomaterials                |
| CO-3:                 | Cognizance of nanobiomaterials                              |
| CO-4:                 | Project several utilizations of biomaterials                |
| CO-5:                 | Case studies of biomaterials for medical applications       |

| Syllabus Details |  |
|------------------|--|
| Unit I           | Introduction to biomaterials, Tissue Engineering, Biocompatibility, Biodegradation Biofluids and medical devices, Biostructures  |
| Unit II          | Ceramic based biomaterials, metallic biomaterials, polymer-based biomaterials, Biofluidic, medical devices, Biostructures  |
| Unit III         | Nano-biomaterials: Self-assembly of nanomaterials, hydrophilic, hydrophobic and surfaces, biomimicking   |
| Unit IV          | Medical imaging, electrospinning of scaffold structures, Additive manufacturing of medical devices, biofluidics and biostructure   |
| Unit V           | Case studies: Lotus leaf, Gecko feet, Nacre/Bone. Application of nanocomposite biomaterials: artificial biomaterials, antidrag coatings, self-cleaning surfaces, sensors, Riboswitches |

### Textbooks

- *Biomaterials- An Introduction, Joon Park- Publisher Springer*

**Reference Book(s):**

- *Biomaterials- Principals and Applications- Joon Park- CRC Press*
- *Handbook of Biomaterial Properties- Garth Hastings- Springer*
- *Handbook of Biomaterials Properties- William Murphy- Springer*
- *Handbook of Biomaterial Properties- Jonathan Black- Chapman and Hall*

**Course Name: Introduction to Computational Materials Engineering****Course Code: MM 614**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Understand the basics of programming  |
| CO-2:                        | Recognize the principles of data-driven modeling  |
| CO-3:                        | Implement the analytical and numerical solution to partial differential equations utilised in Materials Engineering |
| CO-4:                        | Analyze the mesoscopic modelling techniques   |
| CO-5:                        | Utilise the principles of modelling and simulation to evaluate properties   |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Review of programming in high level languages such as Python / MATLAB / Mathematica and low-level languages such as C / C++ / Fortran                                   |
| Unit II                 | Fitting and visualization of multidimensional data; Quantification of experimental microstructures using programs as well as software tools                             |
| Unit III                | Application of linear algebra towards solution to a system of linear and nonlinear equations; Numerical integration; Numerical solution of diffusion equation;          |
| Unit IV                 | Computational techniques such as phase field method and Monte Carlo towards evolution of microstructure; synthetic microstructures                                      |
| Unit V                  | Evaluation of properties from the computed microstructures using mean field and full field approaches; data analytics using principal component analysis; ICME approach |

**Textbooks**

- *Introduction to Computational Materials Science – Richard LeSar, Cambridge University Press (2013). ISBN: 9781316614877*

**Reference Book(s):**

- *Mathematical Methods for Physics and Engineering, 3rd Edition – R.F. Riley, M.P. Hobson, S.J. Bence, Cambridge University Press (2012). ISBN: 9780521139878*
- *Integrated Computational Materials Engineering (ICME) for Metals – Mark F. Horstemeyer, TMS (2012). ISBN: 9781118022528*
- *Integrative Computational Materials Engineering : Concepts and Applications of a Modular Simulation Platform – Georg J. Schmitz and Ulrich Prahl, Wiley-VCH Verlag GmbH & Co (2012). ISBN: 9783527330812*

**Course Name: Magnetism and Magnetic Materials****Course Code: MM 615**

| <b>Course Outcomes (CO):</b> |   |
|------------------------------|---|
| CO-1:                        | Brief introduction to moment of magnetic materials            |
| CO-2:                        | Analysis of traditional types of magnetism                    |
| CO-3:                        | Conception of effects of magnetism and application            |
| CO-4:                        | Cognizance of material characteristics affecting on magnetism |
| CO-5:                        | Understand different types of magnetic materials              |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Moment of a current loop, Orbital angular momentum and magnetic moments, Spin magnetic moment, gyromagnetic ratio, Vector atom model  |
| Unit II                 | Classical diamagnetism, Superconductors, Paramagnetic moments, classical paramagnetic.  |
| Unit III                | Weiss molecular field, Brillouin function and spontaneous magnetization, Curie Weiss law, Magnetocaloric effect, Exchange interaction, Spin waves, Antiferromagnetism and Néel temperature, Exchange Bias effect and applications, Ferrimagnetism: Spinel structure and Ferrite moments |
| Unit IV                 | Uniaxial and Cubic anisotropy, Shape anisotropy, Crystal field effects, Origin of magnetic domains, Equilibrium domain size and domain wall, Néel and Bloch Walls   |
| Unit V                  | Differentiation between Soft and hard magnetic materials, Finemet alloys, Rare earth permanent magnets, Magnetostriction: TERFNOI-D, Multiferroics, Magnetic Anomaly Detection.   |

**Textbooks**

- *Introduction to Magnetic Materials, B. D. Cullity and C. D. Graham; IEEE Press, A. Jon Wiley & Sons Publications*

**Reference Book(s):**

- *Fausto Florillo, Measurement and Characterization of Magnetic Materials, Elsevier Academic Press, 2004*
- *Modern magnetic Materials: Principles and applications Robert C. O'Handaley; Wiley-Interscience Publications*
- *Physics of magnetism and Magnetic materials*
- *K. H. J. Bushaw and F. R. de Boer; Kluwer Academic Publishers*

**Course Name: Heat-treatment of Metals and Alloys****Course Code: MM 616**

| <b>Course Outcomes (CO):</b> |
|------------------------------|
|------------------------------|

|       |   |
|-------|---|
| CO-1: | Explore several heat treatment processes and TTT curve.       |
| CO-2: | Analyse the case hardening heat treatment processes           |
| CO-3: | Comprehend the advanced heat treatment methods                |
| CO-4: | Identify different heat treatment process for specific metals |
| CO-5: | Demonstration of after effects of heat treatment              |

| Syllabus Details |  |
|------------------|--|
| Unit I           | Steel Heat-Treatment, Annealing, Stress relief annealing, Process Annealing, Normalizing, Spheroidizing, Tempering, Quenching, Hardening, TTT Curve, Hardenability |
| Unit II          | Case hardening, carburizing, Nitriding, Boronizing   |
| Unit III         | Flame hardening, Induction hardening, Laser hardening, Electron beam hardening   |
| Unit IV          | Heat treatment of Aluminum, Titanium and Magnesium Alloys  |
| Unit V           | Deformation and annealing.   |

### Textbooks

- *Heat Treatment Principles & Techniques*, TV Rajan, CP Sharma & Ashok Sharma Prentice Hall of India, New Delhi, 2007.
- *Metallurgy for Engineers-EC Rollason*, 4th Ed, Edward Arnold, UK, 1973.
- *Introduction to Physical Metallurgy*, S H Avner, TATA Mc-Graw Hill, New Delhi, 2001.

### Reference Book(s):

- *Engineering Physical Metallurgy* by Yuri Lakhtin, Moscow, MIR Publishers, 1963.
- *Grain boundary migration in metals: thermodynamics, kinetics, applications*, G. Gottstein & L. Shvindlerman, Boca Raton (FL), CRC, 1999.

### Course Name: Materials for High -Temperature Applications

### Course Code: MM 617

| Course Outcomes (CO): |  |
|-----------------------|--|
| CO-1:                 | An introduction to high temperature materials: Alloys and non-metals and their property requirements |
| CO-2:                 | Concept of creep and high temperature oxidation behaviour and their mitigation.                      |
| CO-3:                 | Case study 1: High speed steels: their application, process and properties                           |
| CO-4:                 | Case study 2: Ni based Superalloys as aero-engine applications, their structures and processing      |
| CO-5:                 | Identified advanced structural ceramics for high temperature application                             |

| Syllabus Details |  |
|------------------|--|
|------------------|--|

|          |   |
|----------|---|
| Unit I   | Melt processing of Superalloy, Single crystal Superalloy, Processing of Superalloy, Alloying effect.          |
| Unit II  | Oxide Dispersion Strengthened alloys. Powder Metallurgy   |
| Unit III | High temperature deformation, Room and high temperature Wear, Advanced coating materials, High Entropy Alloys |
| Unit IV  | Fiber Reinforced Composite Superalloy   |
| Unit V   | Processing and properties of advanced Structural Ceramics   |

### Textbooks

- *Superalloys, supercomposites and super ceramics, ed. J. K Tien and T. Caulfield, Academic Press, 1989, Boston.*
- *High temperature structural materials, R. W. Cahn, Chapman and Hall, 1996, London.*

### Reference Book(s):

- *Materials for High Temp. Engg. Applications, G. W. Meetham and M.H. Van de Voorde, Springer, 2000, Berlin.*
- *Friction, wear and Lubrications, K.C. Ludema, CRC Press, 1996.*
- *Powder Metallurgy: Science, Technology, and Materials Anish Upadhyaya and G. S. Upadhyaya, Taylor & Francis, 2011*

### Course Name: Advanced Steel Technology

### Course Code: MM 618

| Course Outcomes (CO): |  |
|-----------------------|--|
| CO-1:                 | Comprehend different strengthening mechanisms in steel   |
| CO-2:                 | Introduce low carbon steel and their characteristics   |
| CO-3:                 | Explore medium and high carbon steel along with their transformations                          |
| CO-4:                 | Importance of pearlite microstructures   |
| CO-5:                 | Applications of special steel materials like bainite and case studies for defence applications |

| Syllabus Details |   |
|------------------|---|
| Unit I           | Strengthening mechanisms: Work hardening, Solid solution strengthening, Grain size refinement, Dispersion strengthening   |
| Unit II          | <b>Low Carbon steels:</b> Austenite to ferrite transformation, High strength low alloys steels, Interstitial free steels, Dual phase and TRIP steels  |
| Unit III         | <b>Medium and high carbon steels:</b> Austenite to pearlite transformation, Ferritic-pearlitic microstructures in medium carbon steels, Austenite to Cementite transformation, <b>Unit 4:</b> Fully pearlitic microstructures: Rail steels, high strength steel wires |
| Unit IV          | <b>Fully pearlitic microstructures:</b> Rail steels, high strength steel wires  |

|        |  |
|--------|--|
| Unit V | <b>Special steels: Bainite:</b> Upper and lower Bainite microstructures, Bainite transformation mechanisms and transition, nanostructured Bainite; Maraging steels, Stainless steel, TWIP steels, Case studies for defence applications. |
|--------|--|

### Textbooks

- *Steels: Processing, Structure, and Performance*, George Krauss; ASM International

### Reference Book(s):

- *Steels: Microstructure and Properties* HKDH Bhadeshia and Sir R. Honeycomb; Butterworth-Heinemann, Elsevier Publications

### Course Name: Military Materials

### Course Code: MM 619

| Course Outcomes (CO): |   |
|-----------------------|---|
| CO-1:                 | An overview of special materials requirements for military applications.                        |
| CO-2:                 | Requirement of materials, their properties and processes for armor protection systems.          |
| CO-3:                 | Discussion of specific required for ammunition applications and their properties and processes. |
| CO-4:                 | Special alloys and their stringent properties required for building fighter aircraft.           |
| CO-5:                 | Special steels and their process for naval vessels.   |

| Syllabus Details |   |
|------------------|---|
| Unit I           | Overview metallic materials for military application, needs of complex metals and alloys required for modern and sophisticated warfare weapons systems.<br>Conventional alloys for military application: Functional requirements of cartridge case and manufacture, Brass and steel cartridge cases, Cased ammunition. Steel shell bodies – High explosive squash head, Steel guns barrels- Direct fire tank guns, Indirect fire artillery guns, Alloys for military bridges: Mild steel- Bailey bridge and heavy girder bridge, Aluminum alloy – Medium girder bridge and BR 90. |
| Unit II          | Special Alloys for Armour applications: Rolled Homogeneous Armour steels: Kanchan armour for Arjun tank, Steel armour plate, Aluminum alloy armour for light armoured vehicles, Body armour.  |
| Unit III         | Alloys for ammunition applications: Ferrous fragmenting projectiles: Cast iron mortar bomb bodies, Steel 155 mm anti-personnel artillery shell body. Conical shaped charge weapon system, Hydrodynamic penetration, Copper charge penetrators. Kinetic energy penetrators: Armour piercing fin stabilised discarding Sabot, Tungsten heavy alloys as long rod penetrator, Recent development  |

|         |  |
|---------|--|
| Unit IV | Alloys for aerospace applications: Materials required for engine parts, Superalloys for high temperature applications, Single crystal blades made of Ni based super alloys, Aerospace grade low density high strength Ti and Al alloys, Ultra-high-strength steel with the toughness for missile applications. |
| Unit V  | Special alloys for naval applications: Special alloys with functional properties: Advanced magnetic materials - Ultra high energy product permanent magnets, emerging materials such as nanomaterials and smart materials  |

### Textbooks

### Course Name: Introduction to Corrosion

### Course Code: MM 620

| Course Outcomes (CO): |   |
|-----------------------|---|
| CO-1:                 | Introduction to thermodynamics of corrosion             |
| CO-2:                 | Identification of electrode kinetics and polarisation   |
| CO-3:                 | Cognizance of mixed potential theory                    |
| CO-4:                 | Recognized different forms of corrosion                 |
| CO-5:                 | Case studies of environmental factors causing corrosion |

| Syllabus Details |   |
|------------------|---|
| Unit I           | What is corrosion – definition & fundamentals, Importance & Economic Impact of Corrosion, Thermodynamics of Corrosion, Electrochemical principles of Corrosion, Potential versus pH (Pourbaix) diagrams – Calculation & Construction of E – pH diagrams & its practical use. Copper, Aluminium & general corrosion diagram, Mixed Potential or Evans diagram & its application. |
| Unit II          | Electrode Kinetics and Polarization Phenomenon: Electrode – Solution interface – Definition & types of polarization. Exchange current density and polarization relationships. Polarization techniques – corrosion rate determination  |
| Unit III         | Mixed Potential concepts and Basics. Mixed potential theory – bimetallic couples. Activation and diffusion controlled mixed electrodes. Origin of electrochemical noise and its application.  |
| Unit IV          | Forms of Corrosion – Uniform, Localized & Metallurgical influenced – Pitting, Crevice, Galvanic & Intergranular Corrosion, Mechanically Assisted, Environmentally Induced & Microbiologically influenced Corrosion.   |

|        |   |
|--------|---|
| Unit V | Nernst equation, EMF Series and Galvani Series, Stern-Gary eqn. Mechanical and environmental factors affecting corrosion, materials selection for different Defence applications. Passivity, trans passivity and breakdown, corrosion resistant and high temperature resistant materials. |
|--------|---|

### Textbooks

- *Mars G. Fontana, Corrosion Engineering, 3rd Ed., McGraw-Hill, Singapore, 1987*

### Reference Book(s):

- *H.H. Uhlig and R.W. Revie, Corrosion and its control, 3rd Ed., John Wiley, Singapore, 1991*

### Course Name: Welding Science and Technology

### Course Code: MM 621

| Course Outcomes (CO): |  |
|-----------------------|--|
| CO-1:                 | Analyse the welding processes                      |
| CO-2:                 | Understand the physics of welding                  |
| CO-3:                 | Correlation of metallurgy and welding              |
| CO-4:                 | Understand the welding of various alloys           |
| CO-5:                 | Analyse the failures in welding and their remedies |

| Syllabus Details |   |
|------------------|---|
| Unit I           | Classification of welding processes, study of welding arc characteristics, metal transfer during arc welding, heat flow in welding, Chemical reactions in welding, weld pool solidification, effect of welding process parameters on the macro-and micro-structure of weld metal. |
| Unit II          | Thermal cycles in the heat affected zone. Phase transformations in the weld metal and the heat affected zone. High power density processes such as laser and electron beam welding.   |
| Unit III         | Welding metallurgy under high cooling rates. Phenomena of hot-cracking and cold cracking. Residual stresses and distortion during and after welding, Fatigue and fracture of weldments. Sensitized phenomena  |
| Unit IV          | Application of above principles to welding of carbon and alloy steels, cast irons, stainless steels, aluminum and titanium alloys. Weld decay, problems associated with welding of metals and alloys. Stabilized alloy  |
| Unit V           | Pre and post welding Heat treatment processes, Failure analysis   |

### Textbooks

- *K. Easterling, Introduction to Physical Metallurgy of Welding, Butterworths Pub., 1983.*

### Course Name: High Temperature Corrosion

### Course Code: MM 622

| Course Outcomes (CO): |  |
|-----------------------|--|
| CO-1:                 | Brief introduction to free energy, partial pressure and related diagrams |
| CO-2:                 | Analysis of thermodynamics of high temperature gases with metals         |
| CO-3:                 | Conception of effects of defect interaction kinetics                     |
| CO-4:                 | Cognizance of corrosion characteristics affecting metals                 |
| CO-5:                 | Understand different applications of high temperature corrosion          |
| CO-6:                 | Measurement of degradation of materials in high temperature applications |
| CO-7:                 | Understanding high temperature corrosion testing                         |

| Syllabus Details |  |
|------------------|--|
| Unit I           | Free energy, Partial pressure, Ellingham diagram   |
| Unit II          | Introduction, high temperature gaseous reaction (dry), single metal-single oxidant systems, aspects of thermodynamics, kinetics, transport properties, scale morphologies, electrochemical emphasis, various forms of high temperature corrosion including molten salt corrosion, thermodynamic phase stability in metal/gas systems-predominance area diagrams; |
| Unit III         | Theory of point defects in corrosion products, defect interactions, scale growth kinetics and mechanisms, Wagner's parabolic scale growth process, other types of kinetics laws and mechanisms, morphological aspects in the growth of thick scales.   |
| Unit IV          | Corrosion product evaporation, analyses of kinetic data; alloy oxidation-kinetics, mechanisms, morphology, hot corrosion of metals and alloys-mechanisms and examples.   |
| Unit V           | High temperature corrosion in various applications   |
| Unit VI          | Measurements of High – Temperature Degradation, High Temperature Corrosion & Degradation Processes.  |
| Unit VII         | High Temperature Corrosion Testing   |

### Textbooks

- *Phase transformation in metals and alloys, Porter and Easterling.*

**Course Name: Corrosion Mitigation****Course Code: MM 623**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Understand importance of protective coating process and their classification |
| CO-2:                        | Knowledge of the fundamentals and applications of coating techniques         |
| CO-3:                        | Cognizance of factors affecting cathodic and anodic protection               |
| CO-4:                        | Demonstrated corrosion protection in extreme environmental conditions        |
| CO-5:                        | Case studies for Defence Applications  |

| <b>Syllabus Details</b> |  |
|-------------------------|--|
| Unit I                  | Protective Coatings – Introduction, coatings & Coating Processes, Supplementary protection systems, Surface preparation. Classification of inhibitors, Corrosion inhibition Mechanism, Selection of an inhibitor system  |
| Unit II                 | Requirement of protective coatings, classification of organic and inorganic coatings, metallic coatings, electrodeposition and electroless coatings. Paint coatings for corrosion protection, role of resins, pigment, additives and solvents, Advanced coatings (CVD, ALD and PVD). |
| Unit III                | Cathodic and Anodic Protection – principles & classifications, mechanism of Cathodic and anodic protections – influencing factors and Monitoring   |
| Unit IV                 | Corrosion protection in extreme environment such as nuclear irradiation, high pressure etc.  |
| Unit V                  | Case studies relevant to Defence Applications: (Superhydrophobic coatings, anti-barnacles coating, corrosion control of underground pipelines, storage tanks, overhead pipelines, offshore structures, ship hulls, risers, reinforced bars and concrete structures                   |

**Textbooks**

**Course Name: Advanced Coatings**

**Course Code: MM 624**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Recognized requirements of protective coatings and their classification                |
| CO-2:                        | Reviewed commonly used coating methods   |
| CO-3:                        | Conception of coating application of material surface                                  |
| CO-4:                        | Understanding importance of coating to underground surfaces, offshore structures, etc. |
| CO-5:                        | Case studies on advanced coating application   |

| <b>Syllabus Details</b> |  |
|-------------------------|--|
| Unit I                  | Requirement of protective coatings, classification of organic, polymeric and inorganic coatings, conversion coatings, metallic coatings, electrodeposition and electroless coatings.   |
| Unit II                 | Paint coatings for corrosion protection, role of resins, pigment, additives and solvents.  |
| Unit III                | Application techniques: Surface preparation and its importance in coating, role of coating selection & design of coating, failure mechanism, maintenance coatings, industrial paint systems, modern paint coating systems and specific examples. |
| Unit IV                 | Coatings for underground pipelines, storage tanks, overhead pipelines, offshore structures, ship hulls, risers, reinforced bars and concrete structures. Testing and evaluation. TBC, EBC  |
| Unit V                  | Case studies   |

**Textbooks**

- *R. Lambourne and T.A. Strivens, Paint and Surface Coatings, Ellis Horwood D, Chichester, 1987.*
- *2. C.G. Munger, Corrosion Prevention by Protective Coatings, NACE Pub., Houston, 1984.*

- *4. J. Biesiek and J. Weber Portcullis, Electrolytic and Chemical Conversion Coatings, Red Hill Press, 1976.*

- 5. F.A. Lowenheim, *Electroplating: Fundamentals of Surface Finishing*, McGraw-Hill, New York, 1978.

**Course Name: Surface Science and Engineering**

**Course Code: MM 625**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Represented theory of surface reconstructions and its characteristics  |
| CO-2:                        | Learn the effect of theoretical and experimental evaluation of surface energy of substrate surface structure |
| CO-3:                        | Demonstrate thermodynamics of solid liquid and solid gas interfaces  |
| CO-4:                        | Analyzed wear mechanisms and their categorization  |
| CO-5:                        | Fundamentals and applications of surface coating techniques  |

| <b>Syllabus Details</b> |   |
|-------------------------|---|
| Unit I                  | Theory of surface reconstructions, electronic properties of surfaces, interfaces and overlayers. Characterisation of surfaces by photons, electrons and ions as probes. |
| Unit II                 | The effect of substrate surface structure on the overlayer properties. Theoretical and experimental evaluation of surface energies                                      |
| Unit III                | Solid-liquid and solid-gas interfaces-surface potentials, colloids, sedimentation, adsorption and reaction on surfaces. Damage of the surfaces by corrosion and wear.   |
| Unit IV                 | Wear mechanisms and categories of wear. Surface modifications by diffusion, heat treatment and by coatings, Surface Processing laser, electrons and ions                |
| Unit V                  | Physical and vapour deposition, CVD, ion-implantation, thermal spray coating.   |

**Course Name: Reliability Engineering**

**Course Code: MM 626**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1:                        | Detailed overview of probability theory                        |
| CO-2:                        | Assessed fundamentals of FMEA techniques                       |
| CO-3:                        | Inspected Design of Experiments analysis of variance technique |
| CO-4:                        | Investigated future of product liability                       |
| CO-5:                        | Cognizance of product development and its application          |

|          | <b>Syllabus Details</b>   |
|----------|---|
| Unit I   | Basic Probability Theory Basic concepts, Rules for combining Probabilities of events, Failure Density and Distribution functions, Bernoulli's trials, Binomial distribution, Expected value and standard deviation for binomial distribution – Examples   |
| Unit II  | Failure Mode and Effect Analysis (FMEA) Basic Principles and General Fundamentals of FMEA Methodology   |
| Unit III | Design of Experiments Analysis of Variance Technique-Strategy of Experimental Design  |
| Unit IV  | Product Liability and Planning History, Product Safety Law, Product Liability Law, The future of product Liability- Prevention. Degree of Novelty of a Product, Product Life Cycle, Company Goals and Their Effect. Solution Finding Methods- Conventional Methods, Intuitive Methods, Discursive Methods, Methods for Combining Solutions- Examples. |
| Unit V   | Product Development Process General Problem-Solving Process- Flow of Work During the Process of Designing, Activity Planning, Timing and Scheduling, Planning Project and Product Costs, Effective Organization Structures- Interdisciplinary Cooperation, Leadership and Team Behaviour.   |

### **Course Name: Research Methodology and IPR**

### **Course Code: PGC-601**

| <b>Course Outcomes (CO):</b> |  |
|------------------------------|--|
| CO-1                         | Understanding the fundamentals of research and its methodology |

|      |   |
|------|---|
| CO-2 | Choose the appropriate research design and develop appropriate research hypothesis for a research project |
| CO-3 | Knowledge of manuscript preparation, patents and Intellectual property                                    |
| CO-4 | Technology transfer and application of IPR in various domains   |

|          | <b>Syllabus Details</b>   |
|----------|---|
| Unit I:  | Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations |
| Unit II: | Effective literature studies approaches, analysis Plagiarism, Research ethics,  |
| Unit III | Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee  |
| Unit IV  | Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.                           |
| Unit V   | Patent Rights: Scope of Patent Rights. Licensing and transfer of technology.<br>Patent information and databases. Geographical Indications  |
| Unit VI  | New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.  |
